VAPING and your mouth

The risks of vaping aren't just smoke and mirrors. What is vaping capable of doing to the oral cavity? Here are 7 effects:

1 reduces **enamel hardness** by up to 27%

2 affects the periodontal ligament fibroblast, which can **impede regenerative potential**

7 patients may exhibit signs of **burns, irritation and stomatitis**

6 increases **oral C. albicans carriage**

3 increases potential for **xerostomia and halitosis**

5 increases risk of **periodontal disease**

4 increases **microbial adhesion** by 4 times
